GENERAL AND ADMINISTRATIVE PROCEDURES

Introduction

Previous revision to this Capabilities List did not have the corrected name and address location. Revision 4 is a complete rewrite, and complies with CFR Part 145.209(d) (2), and Part 145.215(c) or the latest revision. This revision also is written in the same format as the RSM, QCM and TPM.

Changes are indicated on the List of Effective Pages (LEP). The pages which are revised will be identified on the LEP by an A (Added), R (Revised), or D (Deleted). Each page in the LEP is identified by Section-Subject number, page number, revision number, and page date.

The Capabilities List will be current and made accessible to all repair station personnel. The repair station ensures currency and consistency for all users of the Quality Control Manual by maintaining only one version in a paper format.

To ensure the information is current, every page of the Capabilities List reminds employees that uncontrolled copies are for reference only unless verified as current. Currency is verified by comparing the printed version of the document against a controlled copy of the Capabilities List.

The Accountable Manager is responsible for ensuring that Capabilities List revisions are carried out as set forth in this paragraph and that current and accurate copies are distributed to the administrator, customers, and electronic web site.
